When you employ the services of MDH Technologies you will see that we are committed to quality; we only use products we trust and supply chains that are dependable. All of our Installations come with a 48-business-hour guarantee!

Comprehensive IT Consulting Services

MDH Technologies follows industry standards in the repair and installation of all technology we support.

ABOUT US

MDH Technologies was started in 2005. We are an on-call computer network service and computer repair company located in Frisco, TX. Our focus is on small to medium size businesses; however, we also provide onsite computer services

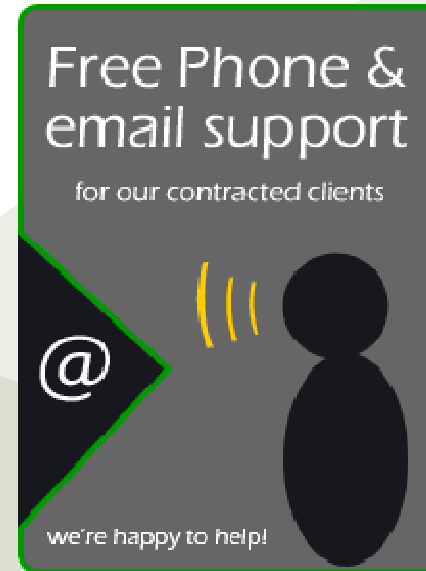

to residential customers as well. Our philosophy is that many businesses don't need and can't afford a full time IT Administrator. With this knowledge, we have successfully implemented solutions for Real Estate, Insurance, Telecommunications, Retail, Medical, IT and other businesses. Our goal is to streamline operations, increase productivity,

lower overhead, and otherwise improve the way your organization operates through the use of technology. This may include setting up servers, networking the computers in your office, computer repair, systems maintenance, etc. We are more than happy to sit down with you and discuss how we can assist your organization; we are eager for the chance to win your business!

MAKING THE GRADE

MDH Technologies won't cheat the system, we pride ourselves on

integrity. We will not use pirated software, or sub-standard products. We will complete your technology projects on time, on budget, and with professional results. We will walk you through the project step by step and explain exactly what we are doing and how it affects you. Finally, a company that will deliver IT services to small and medium sized businesses the right way!

- Does Your Current Technician adhere to industry standards?
- Is your current technician certified to work on your network and PC's?
- Can your current technician also assist with your phone systems?
- Are your systems currently protected with anti-virus?
- Do you know how secure your internet and data is?
- Is your PC running sluggish or is it unpredictable?
- Do you know what the current state of your backups are?
